

CrisisGo Client Story: Chilton School District

Improved School Safety Drills and Drill Reporting

About The Client

Chilton Public Schools
530 W. Main Street
Chilton, WI 53014
www.chilton.k12.wi.us

Customer Since: 2016

"It's everything in one. You don't need an app for one thing but still have to use your binder for something else. It really just modernizes the whole school safety plan."

Jacob Meyer
*Deputy Sheriff/SRO
Chilton School District*

Challenges Faced

The Wisconsin Department of Justice has specific requirements for school safety drills, like active shooter drills, that have to be performed every year.

Chilton School District previously tracked their drill information on spreadsheets, which needed to be maintained and edited after each drill. Chilton also utilized paper and pen methods for taking attendance during drills and phone calls/emails for staff communication during drills.

Proposed Solution

Chilton had been using CrisisGo's Checklist tool to provide staff with their safety plans in the form of digital checklists on their mobile devices and computers. After Chilton rolled out the Roster Event tool, they started doing their fire drills using CrisisGo.

By using CrisisGo to also facilitate safety drills, Chilton was able to:

- Replace their pen and paper method of taking role during drills/emergencies.
- Maintain a single line of communication for drills/emergencies.
- Simplify their methods of reporting drill data.

Outcomes

The staff at Chilton found the CrisisGo features easy to use for safety drills, and the school administrators valued all the data that was captured during the drills.

Chilton's School Resource Officer, Deputy Jacob Meyer informed that a valuable feature is that all the data from each drill is aggregated into a user-friendly report that is easily submitted to the Department of Justice to meet state requirements.

According to Meyer, Chilton School District uses the Roster Event tool for safety drills, and the teachers find it easy to use. Meyer stated, "It was really nice from the administrative standpoint seeing the statistics page and how we could just kind of track everyone's progress: see what students are unaccounted for and correlate that with absences and things like that. That was just a really cool feature."
